DETAILED ACTION

Amendment

1. Acknowledgment is made of Amendment filed May 7, 2006.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given by Mr. Silverbrook on July 12, 2006.

IN THE CLAIMS:

Please amend claim 6 as the following:

6. A scanning device according to claim-4 1, further including a first subsampled framestore for storing the subsampled image data based on image data from the first framestore.

Allowable Subject Matter

3. Claims 1-3, 5-17, and 19-54 are allowed.
4. The following is an examiner's statement of reasons for allowance:

Nagasaki et al. (US 5,896,403) teaches a scanning device for scanning coded data disposed on a surface, the scanning device having a laser source and scan optics configured to emit a scanning beam through an aperture in a housing of the scanning device, the scanning beam being directed in first and second orthogonal directions to thereby generate a raster scan pattern over a scanning patch, the scanning patch being positioned to cause the exposure of the at

least one coded data portion when the surface and the sensing device are positioned operatively with respect to each other; a photodetector for detecting reflection of the scanning beam from the surface; an analog to digital converter for converting the captured sample information into sample data; a framestore for storing successive sample data as image data; an image processor for processing the image data to generate processed image data; a host processor for generating the interaction data based at least partially on the processed image data.

Applicants' remarks on page 12, line 15+ of the Amendment filed May 7, 2006 have overcome the prior art rejection. Nagasaki et al. and the best prior art of record fail to specifically teach wherein the photodetector and image processor are integrated on a monolithic integrated circuit, the integrated circuit including a timing circuitry for generating at least one internal timing signal, the photodetector being responsive to at least one of the internal timing signals to commence scanning of the image information, and at least one external timing signal; and at least one external pin for supplying the at least one external timing signal to at least one peripheral device of the scanning device as set forth in independent claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
